

Course code: CSE - 321

Class Task: 1

Name: Feridous Hafath Chowdhury

ID: 190103020037

Section: A

Semester: 9th

Date: 28 - 09 - 2021

Ans no - 1

EEPROM means Electrically Erasable Programmable read only memory. It is a non-volatile flash memory device. Here stored information is retained when the power is removed. ~~It is~~ the device implements the fewest standards in cell design. Most of the common cells are composed of two transistors. In this storage transistor has the floating gate that

will trap the electrons. Besides, there is another transistor which is used in the operation.

EEPROMs are used in many applications such as telecom, consumer, automobile and industrial applications. Besides, it can work as a data storage from a learn function as in a remote control transmitter.
